OIL AND GAS SECTOR

→ Responsible Care Programme

The oil and gas industry, comprising between 5 and 10% of the global stock market and including some of the world's biggest companies, is deeply embedded in our lives – most of us drive cars, benefit from oil fuelled machines and use plastic every-day. However, CSR in the oil and gas industry tends to be a somewhat polarised debate, with companies claiming that they conduct themselves responsibly and governments often courting their investments and tax revenues, while NGO activists remain highly critical and some ethical funds exclude the whole sector from their portfolios.

Among the critics, oil is frequently vilified for causing pollution, including CO₂ emissions and associated → climate change effects, while the social benefits of the product (from fuelling mobility to the ingredients of Disprin) and the economic contribution of the sector (through investment, taxes, jobs and philanthropy), often areas of high poverty, are seldom acknowledged. Many social and environmental risks are associated with the production process, including oil tanker spills or on-the-ground gas flaring practices. Relations with communities surrounding oil and gas operations are also especially challenging, as are disparities in the flow of economic benefits,

accusations of exacerbating → corruption (the so-called ‘resource curse’), associating with authoritarian regimes (e.g. Burma) and land claims of → indigenous peoples’ organisations.

In response, many oil and gas companies are:

- Continuing their commitment to the principles and practices of the sector-led Responsible Care programme;
- Making efforts to develop new, cleaner products, including low pollution fuels and renewable energy technologies (e.g. Global Climate and Energy Project);
- Engaging with → conservation NGOs to enable the protection of → biodiversity (e.g. Energy & Biodiversity Initiative); and
- Moving towards transparent disclosure of oil revenues, especially payments to government in taxes and political donations (e.g. the → Extractive Industries Transparency Initiative, the NGO-led Publish What You Pay campaign).

Oil and gas is one of the closely monitored industries in the ethical field. Given its significant social and environmental impacts (positive and negative), it is likely to remain in the CSR spotlight, especially among NGO activists, the media, and increasingly financial investors. The sector is in the position of being at the heart of society’s most pressing global challenges (like → climate change and poverty) and also potentially being a profound source of solutions.

DESCRIPTION

This is the world's first complete reference on CSR, compiled by the Institute for Corporate Culture Affairs (the ICCA). The entries have been written by leading experts, leading global thinkers and CSR practitioners. The reference also lists and describes the most important organizations and landmarks in the field of CSR. The book comprises 339 terms, which are split into core concepts, key words and definitions to form the standard reference for managers, academics, teachers, students, officials and volunteers in the field of CSR. This is a timely and innovative contribution to the field of Corporate Social Responsibility; the definitive terminology reference on CSR, business society relations and the organizations and standards in the field.
